NOTES OF THE CASE.

The Metric or Decimal System of Weights and Measures has become legal, and will soon be obligatory, in the United States, as it is in eighteen other countries. Science—a higher authority than governments—uses it in its international language; and the State Medical Societies of Massachusetts, New York, and Pennsylvania recommend its acceptance. Therefore, it is not too soon to accept this system before the law compels physicians to use it, in legal proceedings at least.

It is much simpler than the old system, and enters the mind as soon as it is presented to the eye.

The difficulties attending its use are greatly diminished by learning the metric posology (see end of book).
